February 2013

New Sfera entrance panels from Bticino

Bticino's Sfera ALL METAL and Sfera ROBUR modular entrance panels, available from HPM Legrand, offer a selection of functions and finishes to suit every type of building and installation. A major innovation in terms of aesthetics, function and technology, the Sfera entrance panel utilises the latest two-wire technology to ensure maximum audio and video performance, as well as minimising installation and connection times.

Sfera's modular composition allows a range of functions to be combined with the finish of choice. Designed and manufactured in Italy, any module in the new range can be fitted with a vandal resistant cover for greater durability and longevity.

The aluminium Sfera ALL METAL has a modern style with three colour finishes and is impact resistant up to IK08. The Sfera ROBUR is more robust and comprises a zamak cover and frame with an optional metal box. It is impact resistant up to IK10.

Features of the new Sfera range include;

- night and day wide angle camera with infra-red (IR) LEDs and an automatically removable IR filter
- advanced door lock release functions
- simplified management of activations, programming of residents directly on the device without the need for removal or accessory programming aids
- inductive loop and control speech synthesis
- 13 electronic modules for an unlimited combination
- accessories include flush mounting boxes, tear proof boxes, wall mounting boxes and rain shields

For more information and stockist details, please contact HPM Legrand on 1300 369 777.
